

Serial No. 10/606,110

IN THE SPECIFICATION:

The specification as amended below with replacement paragraphs shows added text with underlining and deleted text with ~~striketrough~~. Applicant respectfully submits that no new matter is being presented.

Please REPLACE paragraph [0032] with the following paragraph:

[0032] These and/or other aspects and advantages of the invention will become apparent and more readily appreciated from the following description of the preferred embodiments, taken in conjunction with the accompanying drawings, of which:

FIG. 1 is a perspective view of a paper feeding unit of a printer employing a conventional apparatus for preventing paper double feeding;

FIG. 2 is a side view schematically illustrating the paper feeding unit of the printer to explain an operation of the conventional apparatus of FIG. 1;

FIG. 3 is an enlarged view illustrating a front end of paper fed in the apparatus of FIG. 2;

FIG. 4 is an exploded perspective view of a paper feeding unit of a printer employing an apparatus for preventing paper double feeding according to an embodiment of the present invention;

FIG. 5 is a side view schematically illustrating the apparatus of FIG. 4;

FIG. 6 is a perspective view of an apparatus for preventing paper double feeding, according to another embodiment of the present invention of FIG. 4;

FIGS. 7 and 8 illustrate a first case where a lever does not contact paper, and a second case where the lever contacts the paper, respectively, to explain an operation of the apparatus of FIG. 4; and

FIG. 9 is a graph illustrating a relationship between a friction force applied to the paper by the lever and other forces in the apparatus of FIG. 4; and

~~FIGS. 10 and 11 illustrate a first case where a lever does not contact paper, and a second case where the lever contacts the paper, respectively, to explain an operation of another embodiment of the apparatus of FIG. 4.~~

Serial No. 10/606,110

Please REPLACE paragraph [0047] with the following paragraph:

[0047] Meanwhile, the lever shaking unit 161 may include a solenoid ~~180~~ (see ~~FIGS. 10 and 44~~not shown) instead of the compression coil spring 168, the cam gear 170, and the lever driving motor 172. Thus, in this embodiment, the shaker includes the solenoid ~~180~~. The solenoid ~~180~~ is coupled with the shaking plate 166 and periodically and directly shakes the shaking plate 166 so that the levers 162 coupled with the lever shaft 164 are shaken.
